| Evaluation rubric helicopter lab-report | | | |
|---|---|---|---|
| **Group number:** | | **Extra feedback:** | |

| Percentage contribution of each lab to the lab grade (%) | |
|---|---|
| General | 10 |
| Lab 1 | 20 |
| Lab 2 | 20 |
| Lab 3 | 25 |
| Lab 4 | 25 |

| | | Percentage-worth | 100 % | 80 % | 60 % | 40 % | 20 % | | Percentage given |
|---|---|---|---|---|---|---|---|---|---|
| | | | **Excellent** | **Very Good** | **Satisfactory** | **Needs improvement** | **Unsatisfactory** | **Extra Feedback** | |
| **General** | **Structure & Format** | | Report is between 15 and 25 pages. The report is exceptionally neat and very easy to read. It is highly organized, with all parts flowing logically. | The report is neat and easy to read, with good organization. Most parts make sense together. | The report is reasonably neat, but some sections are either poorly organized or confusing. | The report is somewhat sloppy and lacks proper organization in several areas. | The report is very disorganized and sloppy, with parts misplaced or missing. | | 0 |
| **Lab 1** | **Background information** | | Provides comprehensive, relevant background information (e.g. the relevant derivations or equations from the preparation exercises) that enhances understanding of the experiments. Maximum 200 words. | Provides relevant background information, with minor omissions or unnecessary details Maximum 200 words. | Provides some relevant background information, but lacks depth or includes unnecessary details. | Provides limited background information, missing key concepts or including irrelevant details. | Fails to provide relevant background information, hindering understanding of the experiments | | 0 |
| | **Hypothesis** | | Clearly states a specific, testable hypothesis that is logically derived from the background information. | States a clear hypothesis that is testable but may not be logically derived from the background information. | States a hypothesis, but it is vague or not clearly testable. | Provides a hypothesis that is unclear or poorly formulated, making it difficult to test. | Fails to provide a hypothesis or presents one that is not relevant to the experiment. | | 0 |
| | **Test plans** | | Provides a detailed, logical, and well-structured plan that clearly outlines all necessary steps and materials. | Provides a clear plan that outlines the main steps and materials, with minor details missing. | Provides a basic plan, however a main step and/or material is missing. | Provides a vague plan with significant missing steps or unclear materials, making execution difficult. | Fails to provide a coherent plan, hindering the ability to conduct the experiment effectively. | | 0 |
| | **Results** | Figures & tables | The figures and tables are complete (units, axis and legends) and extremely neat and detailed, and have a clear description. When e.g. two graphs are compared, they are plotted on top of each other. Each figure and table adds value to the report and are referred to in the text with correct numbering | The figures and tables are complete with appropriate details. The description is missing or could be more clear and concise. Each figure and table adds value to the report and are referred to in the text with correct numbering. | The figures and tables are done, but may be hard to read, may lack some neatness or details or are not referred to in the text. | Figures and tables are present, but are messy and lack detail. | The figures and tables are poorly done (e.g. screenshots from the scope) or missing altogether. | | 0 |
| | | Text | Provides a detailed, logical, and well-structured plan that clearly outlines all necessary steps and materials. | Provides a clear plan that outlines the main steps and materials, with minor details missing. | Provides a basic plan, but lacks clarity or depth in describing steps and materials. | Provides a vague plan with significant missing steps or unclear materials, making execution difficult. | Fails to provide a coherent plan, hindering the ability to conduct the experiment effectively. | | 0 |
| | **Discussion** | | Thoroughly analyzes results, connecting them back to the hypothesis and background; discussions on any discrepancies between your hypothesis and observations | Analyzes results, relating them to the hypothesis and background, but may overlook some discrepancies or implications. | Provides a basic analysis, but lacks depth in connecting results to the hypothesis or addressing discrepancies. | Offers limited analysis with unclear connections between results and hypothesis, and fails to discuss discrepancies. | Fails to analyze results or discuss their relevance, providing little to no insight into the experiment. | | 0 |
| | **Conclusion** | | Clearly summarizes key findings and their significance; effectively relates the conclusion back to the hypothesis and implications for future work. | Summarizes findings well, but may lack clarity in relating them back to the hypothesis or implications for future work. | Provides a basic summary of findings, but lacks depth or clear connections to the hypothesis and implications. | Offers a vague conclusion that does not clearly summarize findings or their significance. | Fails to provide a conclusion or offers one that is irrelevant or confusing. | | 0 |
| | | | | | | | | | |
| **Average lab 1** | | | | | | | | | 0 |
| | | | | | | | | | |
| **Lab 2** | **Background information** | | Provides comprehensive, relevant background information (e.g. the relevant derivations or equations from the preparation exercises) that enhances understanding of the experiments. Maximum 200 words. | Provides relevant background information, with minor omissions or unnecessary details. Maximum 200 words. | Provides some relevant background information, but lacks depth or includes unnecessary details. | Provides limited background information, missing key concepts or including irrelevant details. | Fails to provide relevant background information, hindering understanding of the experiments | | 0 |
| | **Hypothesis** | | Clearly states a specific, testable hypothesis that is logically derived from the background information. | States a clear hypothesis that is testable but may not be logically derived from the background information. | States a hypothesis, but it is vague or not clearly testable. | Provides a hypothesis that is unclear or poorly formulated, making it difficult to test. | Fails to provide a hypothesis or presents one that is not relevant to the experiment. | | 0 |
